

Child Abuse Resources

About Child Abuse

Child abuse and neglect occur when a child under the age of 18 experiences abuse or neglect by a parent, caregiver, or another person in a custodial role (religious leader, coach, teacher) that results in current, potential or threat of harm to a child.

At least 1 in 7 children have experienced child abuse or neglect in the past year in the United States, but many cases are unreported. There are four types of child abuse: Physical, Sexual, Psychological and Neglect.

- Children in families with lower socioeconomic status are **5 times more likely** to experience abuse and neglect.
- Domestic violence is recognized as a leading cause of Traumatic Brain Injury (TBI).
 - Abusers target the head, neck, and face more than any other area of the body, which creates the potential for brain injuries.
 - Brain Injury must be considered when working with survivors. **15.5 MILLION children witness domestic violence per year.** Women often seek shelter *before* treatment for injury.
 - Consider that the parent/caregiver of a child involved with the Child Welfare System may have had a brain injury.

Overlap with Brain Injury

Abusive head trauma remains the leading cause of death from physical abuse in children under 5, accounting for one-third of all child maltreatment fatalities (CDC 2024). Keep in mind that a parent or caregiver involved with the child welfare system may have sustained a brain injury. It is unknown how many parents and children involved in the system have brain injuries. Cognitive changes after a brain injury can make parenting and complying with the rules and appointments of the child welfare system more challenging. Parents with brain injuries may struggle more with parenting, having lower frustration tolerance, being quick to anger, exhibiting increased impulsivity, and making poorer judgments. Children with brain injuries may find it harder to conform and adapt to placements. Children and adolescents with TBIs are at increased risk of mental health issues, academic struggles, and social challenges well into adulthood and should therefore be monitored for difficulties over time.

Parents and children should be screened for prior history of brain injury and any cognitive or functional changes. Accommodations should be provided and reinforced frequently to ensure their learning and use. Parents and children should be educated about their injury and what can be done to help alleviate it. Families should be referred to services or symptom specialists in the community for additional help when needed.

Overlap continued:

Children from early childhood through adolescence and young adulthood, especially, should be monitored over time for challenges with academics, cognition, physical ability, mental health and behavior. Their medical and academic charts should contain a designated form to indicate their history of brain injury, including concussion, so the knowledge is not lost when they transition from one teacher to another or one school to another, including transitions from early childhood settings. See [Concussion/TBI Alert and Monitoring Form](#). The research showing differences in children with and without brain injury several years later highlights the importance of this tracking.

[Darkness to Light](#) End Child Sexual Abuse

"Darkness to Light empowers adults to prevent, recognize, and react responsibly to child sexual abuse through awareness, education, and the reduction of stigma."

Child Advocacy Centers in Tennessee A children's advocacy center is the ONE place that provides a safe, child-friendly environment where law enforcement, child protective services, prosecution, medical and mental health professionals may share information and develop effective, coordinated strategies sensitive to the needs of each unique case and child. Find a local CAC: cactn.org

Centers of Excellence for Children in State Custody "focused on improving comprehensive well-being of children in or at risk of state custody. Centers of Excellence assist in providing science-based guidance to improve children's health, behavioral outcomes, and improve systems serving children by providing clinical consultations, evaluations, and limited direct services to children with complex needs. There are five locations across the state to serve children in or at risk of state custody."

<https://www.tn.gov/tenncare/tenncare-kids/centers-of-excellence.html>

TN Voices "TN Voices utilizes evidence-based practices and approaches to promote social-emotional competence in young children. TNV collaborates with families to provide training, support, and resources to strengthen the family unit." <https://tnvoices.org/children/>

Team TN mission "Team Tennessee, using the Pyramid Model framework, facilitates public-private collaborations to strengthen the social-emotional development of all infants and young children." <https://tnvoices.org/teamtn/>

TN Commission on Children and Youth "The Tennessee Commission on Children and Youth (TCCY) is an independent, nonpartisan agency created to ensure the state's policies and programs effectively promote and protect the health, well-being and development of children and youth.

Established by the Tennessee General Assembly as a permanent commission, TCCY is the state's centralized informational resource and advocacy agency for timely, fact-based information to aid policymaking and coordination of resources." <https://www.tn.gov/tccy.html>

TCCY's data dashboard [FUTURE](#), provides Tennessee County Profiles of Child Well-Being that offers valuable insights into the well-being of children & youth in communities across the state.

Resilient TN Collaborative "Fosters connections to promote positive childhood experiences for infants, children and youth across all communities in TN."

Community Health Access and Navigation in TN (CHANT) "CHANT is an integrated model of care coordination provided through the local health departments. The program provides enhanced patient-centered engagement, assistance with navigating complex systems, and care coordination of medical and social service needs. Families and individuals are connected to available resources which may include reimbursement for medical services and assistance with co-pays, deductibles, and co-insurance for children and youth with physical disabilities." <https://www.tn.gov/health/health-program-areas/fhw/chant/about-chant.html>

Individuals eligible for CHANT include:

- Pregnant and postpartum adolescents and women
- Children (Birth - 21 years)
- Children and Youth with Special Healthcare Needs (Birth - 21 years)

Model Programs

Handle with Care "Handle with Care" provides the school or childcare agency with a “heads up” when a child has been identified at the scene of a traumatic event. It could be a meth lab explosion, a domestic violence situation, a shooting in the neighborhood, witnessing a malicious wounding, a drug raid at the home, etc. Police are trained to identify children at the scene, find out where they go to school or daycare and send the school/agency a confidential email or fax that simply says . . . “Handle Johnny with care”. That’s it. No other details. <https://tnhandlewithcare.org/>

Partners in Care Program a collaboration between the Metro Nashville Police Department, Mental Health Cooperative, and other metro government agencies created to better serve individuals in the community who are experiencing a behavioral health crisis. The Partners in Care program strives to improve access to care for individuals experiencing a behavioral health crisis, divert consumers from the criminal justice system and into the health care system, all while improving the communication and coordination across all systems of care, and increasing the safety of all involved in these crisis interactions. <https://www.nashville.gov/departments/police/investigative-services/major-crimes/alternative-policing-strategies/partners-care>
